The scores of the original and redesigned TOEIC Bridge tests are linked in both skills — Listening and Reading — using a single group equipercentile method. Data (N=2,907) were collected from pre-operational samples before the launch of the redesigned TOEIC Bridge tests. Test takers in the samples are from Japan (88 percent), Korea (8 percent), and Taiwan (4 percent) and took both tests within one year. The score range in each section is from 10 to 90 for the original TOEIC Bridge test and from 15 to 50 for the redesigned TOEIC Bridge tests.

ETS periodically reviews materials as more data become available. This table may be revised as needed.
